

Manual presetting valve MSV-F2, PN 16/25, DN 15 - 400

In constant flow installations MSV valves keeps constant pressure drop. Its value may be set on several levels depending on presetting.

Ordering

MSV-F2 valves - PN 16

- 9 Spindle
- 10 Stuffing box
- 11 Bonnet
- 12 Allen screw /Hexagon screw
- 13 Flat gasket
- 14 Hood with stroke

Setting

Ethylenglycol correction factor

Formula:

Density at 20 °C:

$\rho_{\text{water}} = 1 \text{ kg/dm}^3$

$\rho_{\text{glycol}} = 1.338 \text{ kg/dm}^3$

$$Q_{\text{corr.}} = \frac{Q_{\text{water}}}{\sqrt{\text{Share of water} \times \rho_{\text{water}} + \text{Share of glycol} \times \rho_{\text{glycol}}}}$$

Ethylenglycol part xg (%)	0	10	20	30	40	50	60	70	80	90	100
Correction factor	1.0	0.983	0.968	0.953	0.939	0.925	0.912	0.899	0.887	0.876	0.864

MSV-F2 DN 65

Δp = 0.6 bar

Hand wheel setting: 3.0

Flow: 16.8 m³/h

30 % glycol

$Q_{\text{corr.}} = 16.8 \text{ m}^3/\text{h} \times 0.953 = 16.0 \text{ m}^3/\text{h}$

It refers to all types of valves.

Installation

Always install the valve with the arrow on the body in the same direction as the flow. In order to avoid turbulence, which will affect the measuring accuracy, it is recommended to have a straight length of pipe up and down stream from the valve as shown (D - diameter of pipe).

The influence of turbulence, if our recommendations are not adhered to, can influence the flow up to 20 %.

MSV F2 DN 200-400 may not be mounted with handle pointing down.

Sizing

Example:

MSV-F2 DN 65

$Q = 16 \text{ m}^3/\text{h}$

$\Delta p = 5 \text{ kPa}$

Calculation of setting for valve:

In the diagram a straight line connecting the bars for flow $16 \text{ m}^3/\text{h}$, differential pressure 5 kPa and k_v value shows the relationship between these three variables.

A horizontal line from intersection with the k_v bar shows the presetting value for each valve size.

Result:

presetting 7.0

Flow diagrams
